STOVAX VIEW8 FREESTANDING

The pure, simplistic form of the Stovax View 8 Freestanding wood burning fireplace belies the high levels of engineering and technical innovation that offers exceptional performance and controllability. The View 8 uses Stovax's firebox technology to provide you higher efficiency when heating your home. This technological advancement called 'Cleanburn' is achieved by preheating secondary air as it passes through a heat exchanger chamber within the firebox. It is then drawn into the smoke stream, where it combusts unburnt hydrocarbons to provide a cleaner burn and greater thermal efficiency. In addition 'Airwash' is part of the firebox air flow technology. Airwash is a design feature that uses a specially placed vent or vents to draw in cool air from the outside to 'wash' over the inside of the glass. This helps to keep the glass cleaner for longer. The View 8 has a cast iron door and a large glass window to enjoy the burning flames. An optional Glass Top Plate can be fitted for a more contemporary look, and to complement the glass on the plinth beneath the stove. The View 8 can be hearth mounted or sited onto the optional Riva™ Bench to achieve a distinctive look and create maximum visual impact.

HEATER OUTPUT	EFFICIENCY	EMMISSIONS	
12.0 kW / 168m ²	65%	1.8g/kW
